

NPL Site Narrative for Defense General Supply Center (DLA)

DEFENSE GENERAL SUPPLY CENTER Chesterfield County, Virginia

Federal Register Notice: [July 22, 1987](#)

Conditions at proposal (October 15, 1984): The Defense General Supply Center (DGSC) is located in a suburban area in Chesterfield County in eastern Virginia, 2 miles south of the Richmond city limit and 1 mile west of the James River. It is a part of the Defense Logistics Agency. DGSC manages and furnishes general military supplies to the Armed Forces and several Federal civilian agencies. The 0.5-square-mile site includes a hazardous waste landfill, a fire training pit, and storage areas where hazardous substances were spilled.

Several hazardous substances associated with the site have contaminated ground water on and off the site, according to tests conducted by DGSC. Contaminants detected include chloroform, methylene chloride, dichlorobenzene, di-, tri-, and tetrachloroethylene, and chromium.

DGSC is participating in the Installation Restoration Program, established in 1978. Under this program, the Department of Defense (DOD) seeks to identify, investigate, and clean up contamination from hazardous materials. DOD has completed Phase I (records search). Phase II (preliminary survey) is underway. Limited remedial work has been completed. The fire training pit has been drained, and the dike surrounding it has

been used as fill.

Other parts of DGSC acquired Interim Status under the Resource Conservation and Recovery Act (RCRA) when DGSC filed Part A of a permit application.

Status (July 22, 1987): What DGSC hopes will be the final phase of DOD's equivalent of a remedial investigation started in May 1985. This field work includes the installation of monitoring wells to define upgradient contamination and to further define the sources of contamination. In addition to the monitoring wells, many bore holes will be drilled to collect soil samples to confirm the existence and locations of known or suspected contaminant sources. The investigation by DGSC includes both on-site and off-site contamination.

Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of RCRA. However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 (48 FR 40662).

[The description of the site (release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See [56 FR 5600](#), February 11, 1991, or subsequent FR notices.]
